

# Internet Memory SaaS Blueprint

## 1. Core Idea & Vision

- Build a Chrome extension that allows users to save any webpage instantly.
- Eliminate manual folder organization completely.
- Enable fast natural-language search to retrieve saved content.
- Position the product as a personal internet memory system, not a bookmark manager.
- Long-term goal: Generate recurring income that can cover monthly personal expenses.

## 2. Problem Being Solved

- Users save bookmarks but struggle to find them later.
- Existing tools rely on manual folder and tag management.
- People remember vague context, not exact titles or locations.
- Reddit and article saves are frequently lost or forgotten.

## 3. MVP Features (Phase 1)

- Chrome extension with one-click save button.
- Capture URL, page title, meta description, and timestamp.
- Optional selected text saving.
- Cloud sync using backend database.
- Simple dashboard with powerful search.

## 4. Technical Architecture

- Frontend: Chrome Extension (Manifest V3, JavaScript or React).
- Backend: Supabase (Postgres database + authentication).
- Hosting: Cloudflare Pages or Netlify (free tier).
- API Layer: Supabase Edge Functions or simple REST endpoints.

## 5. AI Integration Strategy

- Use AI only during save action (not constantly).
- Generate short summary (1–2 sentences).
- Generate 3–5 contextual tags automatically.
- Create vector embeddings for semantic search.

- Store embeddings in database for natural-language retrieval.

## **6. AI Workflow (Simple Version)**

- User clicks save in extension.
- Extension sends URL + content to backend.
- Backend extracts main text content.
- AI generates summary, tags, and embedding vector.
- Data stored in database.
- Search queries converted into embeddings and matched against stored vectors.

## **7. Monetization Plan**

- Free tier: Up to 100 saves.
- Pro plan: \$3/month or \$29/year unlimited saves.
- Early adopter lifetime plan for first 200 users.
- Focus on recurring subscription income.

## **8. Future Roadmap**

- Mobile share extension.
- Weekly rediscovery emails.
- Cross-browser support.
- Personal knowledge insights dashboard.
- Team/shared memory version.
