

# Product Concept Document

## Product Title:

Smart Internet Memory – Never Lose What You Save Online Again

## Problem Statement:

- Users save bookmarks, Reddit posts, articles, and videos but struggle to find them later.
- Manual folder organization is time-consuming and rarely maintained.
- Existing bookmark tools focus on storage, not intelligent retrieval.
- Users forget where or when they saved valuable content.

## Our Solution:

- One-click smart save via Chrome extension.
- Automatic tagging and summarization.
- Powerful natural-language search for fast retrieval.
- Zero manual organization required.
- Weekly rediscovery feature to surface forgotten saved content.

## Target Audience:

- Knowledge workers and software professionals.
- Reddit and YouTube heavy users.
- Students and researchers.
- Content creators and online learners.

## Current Competitors:

- Raindrop.io – Bookmark manager with folders and tags.
- Pocket – Read-it-later content saver.
- Notion – Knowledge management system.
- Chrome Bookmarks – Basic browser storage.

## Our Differentiation:

- Focused on retrieval, not storage.
- No manual folder management required.
- Optimized for Reddit, articles, and quick saves.

- Clean, minimal interface designed for speed.
- Affordable pricing focused on individuals.

## **Why Users Should Choose Us:**

- Find saved content in seconds using natural language search.
- Save time spent searching through messy bookmark folders.
- Lightweight and distraction-free experience.
- Affordable pricing with clear value.

## **Pricing Strategy:**

- Free Tier: Up to 100 saves with basic search.
- Pro Plan: \$3/month or \$29/year for unlimited saves and smart search.
- Early Adopter Offer: Lifetime plan for first 500 users.

## **Long-Term Vision:**

- Become the default memory layer for internet users.
- Expand to mobile share extensions.
- Add AI-powered contextual insights and smart resurfacing.
